Is Promoted in the Northwestern States.

St. Paul, July 13.—Reports from all over the Northwest indicate a good outlook for spring wheat in the three spring wheat states—Minnesota, North Dakota and South Dakota. A condition for July 10 is generally better than for a similar date in the harvest.

It has been a heavy growth with surface falling in many sections, a condition that may lead to a late harvest, or to imperfect maturity, under hot winds later in the month.

The present prospect is full of promise, however, and without check, from unfavorable weather conditions, a large yield will follow, 200,000,000 bushels or more, with the probability that in any event the yield will not fall below 150,000,000.
