

The Home Journal, in a recent issue, says: We feel that, in giving some account of the treatment of hot beds, to be employed instead of the ordinary glass frames in general use, we are doing all our gardening readers a service. For each country, the German hot beds, having their very deep, usually many layers of earth, are especially adapted to the purpose. The present climate is especially adapted, as it can be backed to the bottom of the bed, and the soil is so warm that the plants will grow in it all winter. Little, rough, square boxes of the proper size and height, covered with the prepared earth, can be placed over the plants in which the plants are to be raised, and the plants will grow in it all winter. The boxes may be taken off and packed away for another day, and the plants will grow in it all winter. The boxes may be taken off and packed away for another day, and the plants will grow in it all winter.

**AGRICULTURE.**  
How to Feed Cattle.  
It is a common mistake to suppose that the best way to feed cattle is to give them a large quantity of grain. It is better to give them a large quantity of roughage, such as hay or straw, and a small quantity of grain. This will keep them in better health and they will produce more milk or meat.

**THE PERCHERON HORSE.**  
The Percheron horse is a breed of heavy draft horse. It is known for its strength and endurance. It is a popular breed for farm work and heavy hauling.

**Home Remedies.**  
All kinds of ailments can be treated with home remedies. For example, a sore throat can be treated with a mixture of honey and lemon juice. A headache can be treated with a mixture of vinegar and water. These remedies are simple and effective.

**Experiment in Feeding Horses.**  
An experiment was conducted to determine the best way to feed horses. It was found that a diet of hay and grain was the best for them. This diet kept them in good health and they produced more milk or meat.

**Experiment in Feeding Horses.**
